APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967

KAMLOOPS PULP & PAPER CO. LTD., of 105 Seymour Street, Kamloops, British Columbia, hereby applies to the Director of Pollution Control for a permit to discharge effluent from a bleached-kraft pulp-mill, located at Kamloops, into Thompson River, which flows west and discharges into Kamloops Lake, and gives notice of its application to all persons affected.

There will be two points of discharge:—

- (a) One-third of volume at the existing discharge, which is 9,000 feet west of West Line National Defence Naval Road;
- (b) Two-thirds of volume at a point approximately 2,500 feet west of the existing discharge.

The land upon which the effluent originates is Lot A, Plan 13383, District Lot 249, Kamloops Division of Yale District.

The quantity of effluent to be discharged is as follows: Maximum rate, 131 cubic feet per second, 48,000 imperial gallons per minute; maximum 12-hour discharge, 35,000,000 imperial gallons; average 24-hour discharge, 60,000,000 imperial gallons.

The operating season during which the effluent will be discharged is continuous.

The average characteristics of the effluent discharged shall be equivalent to or better than the following: Suspended solids, 40 p.p.m.; total solids, 1,400 p.p.m.; biochemical oxygen demand, 40 p.p.m.

The type of treatment to be applied to the waste before discharge is as follows: (1) Neutralization; (2) clarification; (3) mechanical aeration.

I, George Sawada, Secretary, hereby certify that this application does not conflict with the local by-laws of Thompson-Nicola Regional District.

This application, dated on the 23rd day of February, 1970, was posted on the ground in accordance with the Pollution Control Regulations.

This application is to be filed with the Director of Pollution Control, Parliament Buildings, Victoria, British Columbia. Any person whose rights would be affected in accordance with the Act may, within 30 days of the date of application, or within 30 days of the date of publication in The British Columbia Gazette or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating how he is affected.

The following summary of treatment facilities is dated March 10, 1970:—

The plant will include up-to-date controls to permit reuse of waste streams in other parts of the process, collection and return to process of chemical leaks and spills, and other modern methods of operation which will reduce the amount of waste requiring treatment.

The effluent treatment shall consist of:—

- (1) Neutralization to remove acidity or alkalinity;
- (2) Clarification to remove suspended solids; and
- (3) Mechanical aeration to decompose and stabilize the dissolved organic materials that require oxygen (biochemical oxygen demand).

The pulp-mill wastes which are acidic in nature will be brought to a neutral condition. Following the neutralization will be the primary treatment to remove the suspended solids (which consist of pulp fibres, sand, grit, and other settleable impurities). This will be done in a mechanical clarifier, an additional piece of equipment designed to remove solids before the effluent is discharged to ponds.

As a safety measure, two settling-ponds covering approximately 6 acres will be provided to ensure complete removal of the suspended solids.

The final step in the treatment process will be secondary treatment to decompose the dissolved wastes that would otherwise consume oxygen from the water. This will be done in five-day biological oxidation ponds of 85–100 acres in area. Oxygen for this will be provided by mechanical aerators.
